CHANTAL LEGRAND, VERONIQUE DUBERNARD, and JACQUES CAEN. Further Characterization of Human Platelet ADP Binding Sites Using 5′-AMP. Demonstration of a Highly Reactive Population of Sites 1
W. THOMAS JOHNSON and GARY W. EVANS. Isolation of a (Copper, Zinc)-Thionein from the Small Intestine of Neonatal Rats 10
SUSAN MacLEAN-FLETCHER and THOMAS D. POLLARD. Identification of a Factor in Conventional Muscle Actin Preparations Which Inhibits Actin Filament Self-Association 18
KIMIHIKO SATOH and KIYOMI SATO. Glycogen-Binding Protein Components of Rat Tissues .. 28
G. T. EMMONS, E. R. ROSENBLUM, J. M. MALLOY, I. R. McMANUS, and I. M. CAMPBELL. 20,25-Diazacholesterol, Clofibric Acid, and 2,4-Dichlorophenoxyacetic Acid—All Inducers of Myotonia—Perturb the Post-lanosterol Sector of Sterol Biosynthesis in Cultured Chick Embryo Fibroblasts 34
TIMOTHY D. MYERS and ROBERT C. BOERTH. Interactions of Ouabain and Vanadate with (Na^+, K^+)ATPase and Isolated Cardiac Muscle 39
JOHN E. MORLEY, NANCY MEYER, A. EUGENE PEKARY, SHLOMO MELMED, HAROLD E. CARLSON, JACQUELINE E. BRIGGS, and JEROME M. HERSHMAN. A Prolactin Inhibitory Factor with Immunocharacteristics Similar to Thyrotropin-Releasing Factor (TRH) Is Present in Rat Pituitary Tumors (GH3 and W5), Testicular Tissue, and a Plant Material, Alfalfa 47
I. D. ALGRANATI. Inhibition of Polypeptide Synthesis Initiation by a Change of Mg^{2+} Concentration in Wheat Germ Cell-Free Systems 54
JAMES W. EDMONSON and LAWRENCE LUMENG. Biphasic Stimulation of Amino Acid Uptake by Glucagon in Hepatocytes 61
YASUO KISHIMOTO, HUGO W. MOSER, NARIKO KAWAMURA, MARK PLATT, SHARON L. PALLANTE, and CATHERINE FENSELAU. Adrenoleukodystrophy: Evidence That Abnormal Very Long Chain Fatty Acids of Brain Cholesterol Esters Are of Exogenous Origin 69
ABRAHAM KUPFER, JUAN S. JIMENEZ, and S. SHALTIEL. Distinct Conformational Changes in the Catalytic Subunit of cAMP-Dependent Protein Kinase around Physiological Conditions. Do These Changes Reflect an Ability to Assume Different Specificities? 77
ASPANDIAR G. KATKI and CHARLES E. MYERS. Membrane-Bound Glutathione Peroxidase-like Activity in Mitochondria 85
MARILYNN E. ETZLER and CARL BORREBAECK. Carbohydrate Binding Activity of a Lectin-like Glycoprotein from Stems and Leaves of *Dolichos biflorus* 92
ROBERT E. LYNCH and BARRY C. COLE. *Mycoplasma pneumoniae*: A Prokaryote Which Consumes Oxygen and Generates Superoxide but Which Lacks Superoxide Dismutase 98
THERESA L. GIOANNINI and PETER CAMPBELL. An Extrinsic Room Temperature Phosphorescent Probe. Remarkable Shielding of Benzophenone Triplet at the Active Site of Chymotrypsin 106
JAMES W. HAMILTON and JAMES B. ROUSE. The Biosynthesis of Ubiquitin by Parathyroid Gland 114
T. B. ZERKLE, A. C. WADE, and W. L. RAGLAND. Selective Depression of Hepatic Cytochrome *P*-450 Hemoprotein by Interferon Inducers 121
MAMORU SHOJI, DEBORAH A. MAY, BRADLEY C. WISE, and J. F. KUO. Stimulatory Modulator-Requiring Cyclic Nucleotide-Independent Protein Kinase: Partial Purification from Fetal Calf Hearts and Comparison with Various Protein Kinases 128
DAG HENRIKSSON, ROBERT J. TANIS, and RICHARD E. TASHIAN. The Amino Acid Sequence of Carbonic Anhydrase I from the Rhesus Macaque 135
ARTHUR J. SYTKOWSKI. Denaturation and Renaturation of Human Erythropoietin 143
T. J. MARTIN, D. M. FINDLAY, I. MacINTYRE, J. A. EISMAN, V. P. MICHELANGELI, J. M. MOSELEY, and N. C. PARTRIDGE. Calcitonin Receptors in a Cloned Human Breast Cancer Cell Line (MCF 7) 150
THOMAS J. BURNETT, HENRY C. PEEBLES, and JAMES H. HAGEMAN. Synthesis of a Fluorescent Boronic Acid Which Reversibly Binds to Cell Walls and a Diboronic Acid Which Agglutinates Erythrocytes 157

HIRALAL N. KHATRI, CHARLES H. STAMMER, MARION M. BRADFORD, and ROBERT A. McRORIE. The Synthesis of Some *N*-Phosphoryldipeptide Aldehydes 163
STANLEY L. LIN, PAUL O. P. TS'O, and MORLEY D. HOLLENBERG. The Effects of Interferon on Epidermal Growth Factor Action 168
SHOJI SHINOMIYA, KUNIO YAMANE, and TAIRO OSHIMA. Isolation of a *Bacillus subtilis* Transformant Producing Thermostable α-Amylase by DNA from a Thermophilic Bacterium 175
YASUSHI IWASA, YOSHIMI TAKAI, USHIO KIKKAWA, and YASUTOMI NISHIZUKA. Phosphorylation of Calf Thymus H1 Histone by Calcium-Activated, Phospholipid-Dependent Protein Kinase 180
M. A. A. NAMBOODIRI, JOAN L. WELLER, and DAVID C. KLEIN. Rapid and Reversible Activation of Acetyl CoA Hydrolase in Intact Pineal Cells by Disulfide Exchange 188
ERIC LAM and SHU-I TU. Effects of Monovalent Cations on the Activities Associated with Coupling Site III of Rat Liver Mitochondria 196
PUSHKARAJ J. LAD. Activation of Rat Lung Particulate Guanylate Cyclase Due to Filipin-Induced Fluidity Change 203
ALLAN J. YATES, SARITA L. MATTISON, and RONALD L. WHISLER. Effect of Concanavalin A on Ganglioside Metabolism of Human Lymphocytes 211
URSULA V. SANTER and MARY CATHERINE GLICK. An Uncommon Fucosyl Linkage in Surface Membranes of Human Neuroblastoma Cells 219
MASAMITSU FUTAI, HIROSHI KANAZAWA, KEIKO TAKEDA, and YASUO KAGAWA. Reconstitution of ATPase from the Isolated Subunits of Coupling Factor F_1's of *Escherichia coli* and Thermophilic Bacterium PS3 227

Information for Contributors

BIOCHEMICAL AND BIOPHYSICAL RESEARCH COMMUNICATIONS is devoted to the rapid dissemination of timely and significant observations in the diverse fields of modern experimental biology. Manuscripts submitted should be so written as to emphasize clearly the novel aspects of the information reported.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in BIOCHEMICAL AND BIOPHYSICAL RESEARCH COMMUNICATIONS represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Manuscripts in duplicate may be sent to any one of the editors whose names and addresses are listed on the inside front cover. To assist us in ensuring rapid processing of your article, please submit a signed photocopy of the copyright assignment form which appears as page 3 of this "Information" along with your manuscript. (This form will not be binding if your manuscript is not accepted for publication in BBRC.)

To ensure rapid and accurate publication, it is essential that manuscripts conform to the instructions which follow. Manuscripts which are not in accordance with these specifications may be returned.

Preparation of Manuscripts

Article length should not exceed 5 typewritten pages, double-spaced on 8.5 X 11-in. high-quality paper (the complete manuscript, including space occupied by figures and tables, should not exceed 8 pages).

Summary. Each article must be preceded by a brief summary, typed single-spaced, not exceeding 10 lines (approximately 100–150 words). This paragraph should adequately summarize the pertinent findings of the paper.

Typing. Articles are reproduced directly from the submitted manuscript as camera-ready copy. Manuscripts must therefore be typewritten on good quality white bond paper. A black silk or carbon typewriter ribbon should be used. Special care should be taken to ensure a sharp clean impression of letters throughout. Use of an electric typewriter is strongly recommended. Erasures should be avoided. Care must also be taken to avoid errors in spelling, word division and punctuation. **No changes may be made in manuscripts after acceptance.**

Manuscripts should be double-spaced on one side of the sheet; **methods, references, footnotes and figure legends should be single-spaced.** Typing area of the page must be as close as possible to 6.5 in. wide and 9.5 in. long.

Symbols and Abbreviations defined in the IUPAC-IUB Document No. 1 (*Arch. Biochem. Biophys.* (1966) **115,** 1–12) may be used without definition. Use of all other abbreviations and symbols is to be avoided. When abbreviations are essential, they should be consistent with the form and style of the above document and **must be defined in a single footnote and typed on a separate page,** rather than in the text. Such abbreviations **must not** be used in the Summary.

Enzyme names should not be abbreviated except when the substrate has an approved abbreviation (e.g., ATPase). Use the Enzyme Commission ("EC") code number when available.

Isotopes should be styled following the recommendations of the IUB Commission of Editors of Biochemical Journals. The symbol of the isotope introduced should be placed in square brackets directly attached to the front of the name (e.g., [^{32}P]CMP). Note that the isotope number should only be used as a (superior) prefix to the atomic symbol, not to an abbreviation.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

For further information regarding nomenclature authors are advised to consult the Instructions to Authors of the **Archives of Biochemistry and Biophysics (1980) 199,** v-xxii. Reprints are available from the Publisher.

Footnotes, references, and figure legends should be typed single-spaced on separate pages.

Illustrations and Tables. **Do not attempt to insert figures, figure legends or tables into the text.** This will be done by the Publisher.

All drawings should be clearly labeled in black ink in a manner suitable for direct reproduction (Leroy lettering size 120 or 140). Do not use press-on lettering; typewritten lettering is not acceptable.

Figures will be reduced to fit within the type area of the page (approximately 5 X 8 in.); the original drawings should be no larger than 8.5 X 11 in.

Glossy photographs of drawings are acceptable provided they are sharp, clear prints with an even *black* density.

Mathematical or chemical symbols that cannot be typed should be inked in carefully in black. Structural formulas should be drawn in black ink.

Illustrations and tables should be submitted on separate sheets.

Page Numbers and Headings. Page numbers should be typed at the top of the page.

The title of the paper should be typed in capital letters near the top of the first page, with the name(s) and affiliation(s) of the author(s) typed just below. Headings within the article should be arranged according to their relative importance.

References to the literature should be cited by the number in parentheses in the text and listed in numerical order in a single-spaced typed list placed at the end of the manuscript. Abbreviations of journals should conform to those of *Chemical Abstracts Service Source Index, 1969.* Note the following examples.

For a journal article:

1. Chattorai, D. K., and Bull, H. B. (1971) Arch. Biochem. Biophys. 142, 363–370.

For a book by one or more authors:

2. Robinson, G. A., Sutherland, E. W., and Butcher, E. (1971) Cyclic AMP, pp. 298–302, Academic Press, New York.

Note that inclusive pagination must be given.

Acknowledgment of Receipt. Authors desiring acknowledgment of receipt of manuscript should enclose a stamped self-addressed card.

Reprints. Reprint order forms, with price lists, are sent to the authors immediately upon acceptance of their manuscript.
